Introduction of LG Chem

LG Chem

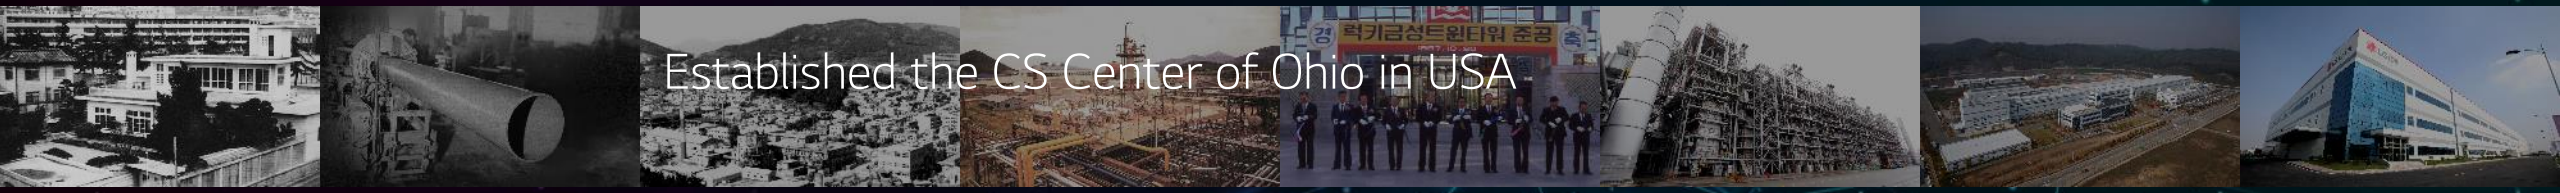
LG Chem | History

Since its founding, LG Chem is vigorously moving forward towards a sustainable future



1947 - 1999

1947	Established as Lucky Chemical Industrial Corporation
1969	Listed on Korea Stock Exchange
1974	Renamed as Lucky Corporation
1976	Completed construction of Yeosu PVC Resin Plant
1979	Opened Daedeok Central R&D Center
1991	Developed the world's first 4th-generation cephalosporin antibiotics
1995	Renamed as LG Chem, Ltd. Completed construction of Tianjin PVC plant in China

2000 - 2009

2001	Spinned off business entities (LGCI, LG Chem, LG Household & Healthcare)
2003	Acquired Hyundai Petrochemicals Factive became first Korean new drug to receive U.S. FDA approval
2004	Developed the world's first nanotechnology-applied new EP material
2005	Established LG Chem (China) Investment Co., Ltd. Established a sales subsidiary in Europe (in Germany)
2007	Merged with LG Petrochemicals Co., Ltd
2008	Develped Korea's first metallocene-based elastomer
2009	Spinned off Industrial Materials Business (now LX Hausys)

2010 - 2023

2016	Acquired Dongbu Farm Hannong (Farm Hannong)
2017	Merged with LG Life Sciences Co., Ltd.
2020	Spinned-off battery business (now LG Energy Solution)
2021	Launched LETZero of Eco-friendly Materials brand
2022	Established a Cathode Material joint venture LG-HY BCM (in Gumi)
2023	Acquired AVEO Oncology
2024	Established the Customer Service Center of Ohio in USA
2025	Started Construction of Korea's first eco-friendly HVO fuel plant (in Daesan)

LG Chem | VISION

To achieve our vision, **“We Connect Science to Life for a Better Future,”**
LG Chem will become **Top Global Science Company** that leads with **Science for Sustainability.**

WeConnectScience
to life for a Better Future

Leading with Science for Sustainability.

LG Chem | Sustainability Roadmap

Through the execution of our sustainability strategy,
we will **secure future growth engines and strengthen ESG competitiveness**

LG Chem Innovative Sustainability

Vision

Deliver advanced, innovative and sustainable solutions for our environment and society

Strategic Directions

Leading Sustainable Innovation for Customer + Managing the Impacts of Climate Change + Making a Positive Contribution to Society

Key areas

Leading Sustainable Innovation for Customer	Managing the Impacts of Climate Change	Making a Positive Contribution to Society
Responsible Products *	Climate Action *	Responsible Supply Chain *
Circular Economy *	Renewable Energy *	Human Rights / Diversity
Environment Protection (ZWTL) *	Water Management *	Safety / Wellness
Zero Waste to Landfill		

* LG Chem's top priority

LG Chem | Decarbonization Strategy for Sustainable

Towards Top Global Science Company

Carbon-neutral growth by 2030, Net-Zero by 2050

Acceleration of low-carbon transition

Expansion of eco-friendly product portfolio

Transition to renewable energy

Offset carbon emissions

Enhancement of competitive edge in low-carbon products

Introduction of new processes and expanded use of eco-friendly raw materials and fuels

Establishment of Scope 3 management standards and implementation system for low-carbon strategy in the supply chain

Implementation of Net-Zero through partnerships

Demonstration of global leadership to combat Net-Zero

Development of innovative technologies and a circular economy through cross-industry collaboration

Towards Top Global Science Company

World-class Science company with strong R&D capability

Fostering high-value & Eco-friendly technologies

- High-value innovative in differentiation technology
- Bio-based Feedstock / Recycling technology
- Carbon Capture & Utilization(CCU) Technologies

Development of next-generation materials

- Cost innovation / high-capacity cathode material
- Semiconductor & Adhesive materials
- AI·Non-memory packaging, Display Films, High-performance EP Materials

Innovative Drug& Technology Development to address Customers' Unmet needs

- Global innovative oncology drugs
- Next-generation drug modality platforms
- Formulation & Process Innovation for Enhanced Patient Convenience

LG Chem Eco-friendly Materials Brand

Eco-friendly Materials Brand LETZero

A compound word of “Let” and “Zero,” which means “to turn harmful substances to the environment and the net increase in carbon emissions into zero.”

LETZero Products

Recycle

Produce the PCR materials by enables the recycled waste plastics

PCR (Post Consumer Recycled)
ABS, PC, PC/ABS, PE, PP, PVC, Plasticizer

Circular Balanced
Most Materials Produced by LG Chem

Bio

Bio-Based Materials blended with renewable Vegetable Oil-derived Feedstocks and Fossil-Based Feedstocks

Bio-Circular Balanced
Most Materials Produced by LG Chem

LETZero Co-Marketing

PCR (Post Consumer Recycled)
EV Chargers,
Home application POP

BCB(Bio-Circular Balanced)
Descent Shoe,
Kitchen Furniture Film

Petrochemical Products

- **2025** Started Construction of Korea’s first eco-friendly HVO fuel plant (in Daesan)
- **2024** Established of Asia's first next-generation insulator Aerogel plant (Dangjin)
  Established the CS Center of Ohio in USA
- **2023** Established the CS Center of Europe in Germany
- **2022** Launched Asia's first plant-based eco-friendly ABS
- **2021** Acquired *ISCC for Korea's first eco-friendly (bio-circular balanced, Chemical Recycle) product. * ISCC (International Sustainability and Carbon Certification)
  Launched digital CRM system LG Chem On
- **2019** Established the largest petrochemical tech center in Korea (Osan CS Center)
- **2015** Established the CS Center of Hwanam , Guangzhou in China
- **2003 ~ 2010** Acquired Dow Polycarbonate business(10)
  Merged with LG Petrochemicals Co., Ltd.(‘07)
  Acquired PVC Business of Hyundai Petrochemicals Co., Ltd.(‘03)
- **1995 ~ 1998** Established Manufacturing Subsidiary in China / India / Vietnam (PVC, ABS)
- **1976** Completed construction of Yeocheon PVC resin factory
  Entry into the petrochemical business

Providing Differentiated Customer Value with High Value-Added and Sustainable Materials

High Value-Added / Specialty

- Expanding Differentiated Business Centered on Customers and Application
  - Eco-Friendly, High-Gloss, Heat-Resistant ABS/ASAS for Automotive Application
  - Cutting-Edge Solutions with Modified SSBR for Hight-Performance Tires
  - Ultra-High-Purity IPA for Semiconductor Manufacturing Process

Recycle

(Establish circular economy of waste plastics)

- A Global Branded Product Portfolio incorporating PCR Materials
- 50+ ISCC Plus Certified CB(Circular-Balanced) Products
- Securing Stable Feedstock Supply and Establishing a Closed-Loop system through Strategic Partnerships

Bio

- World's First Commercialization of BCB(Bio-circular balanced) SAP
- Asia's First Launch of BCB ABS
- 50+ ISCC Plus Certified BCB Products
- Securing Stable Supply through In-House Eco-Friendly Feedstock (HVO) Integration

Specialty Materials / Sustainability

LG Chem is expanding its portfolio to secure future competitiveness, focusing on high value-added specialty materials and diverse sustainability-driven business such as Bio and Recycling. In particular, through 'LETZero', eco-friendly materials brand embodying the commitment to achieve(NetZero)eliminating environmental harm and net increases in carbon emissions. LG Chem delivers customer and application centered differentiated products and solutions. By proactively proposing new value that customers demand, the company contributes to future growth in the global market and to the creation of sustainable value.

Specialty(ABS/ASA, SSBR, IPA, etc.)

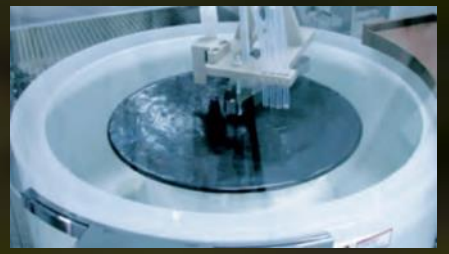
Bio(Bio-Circular balanced)

Recycle(PCR, Circular balanced)

Applications

자동차 내/외장재

타이어



반도체 세정제

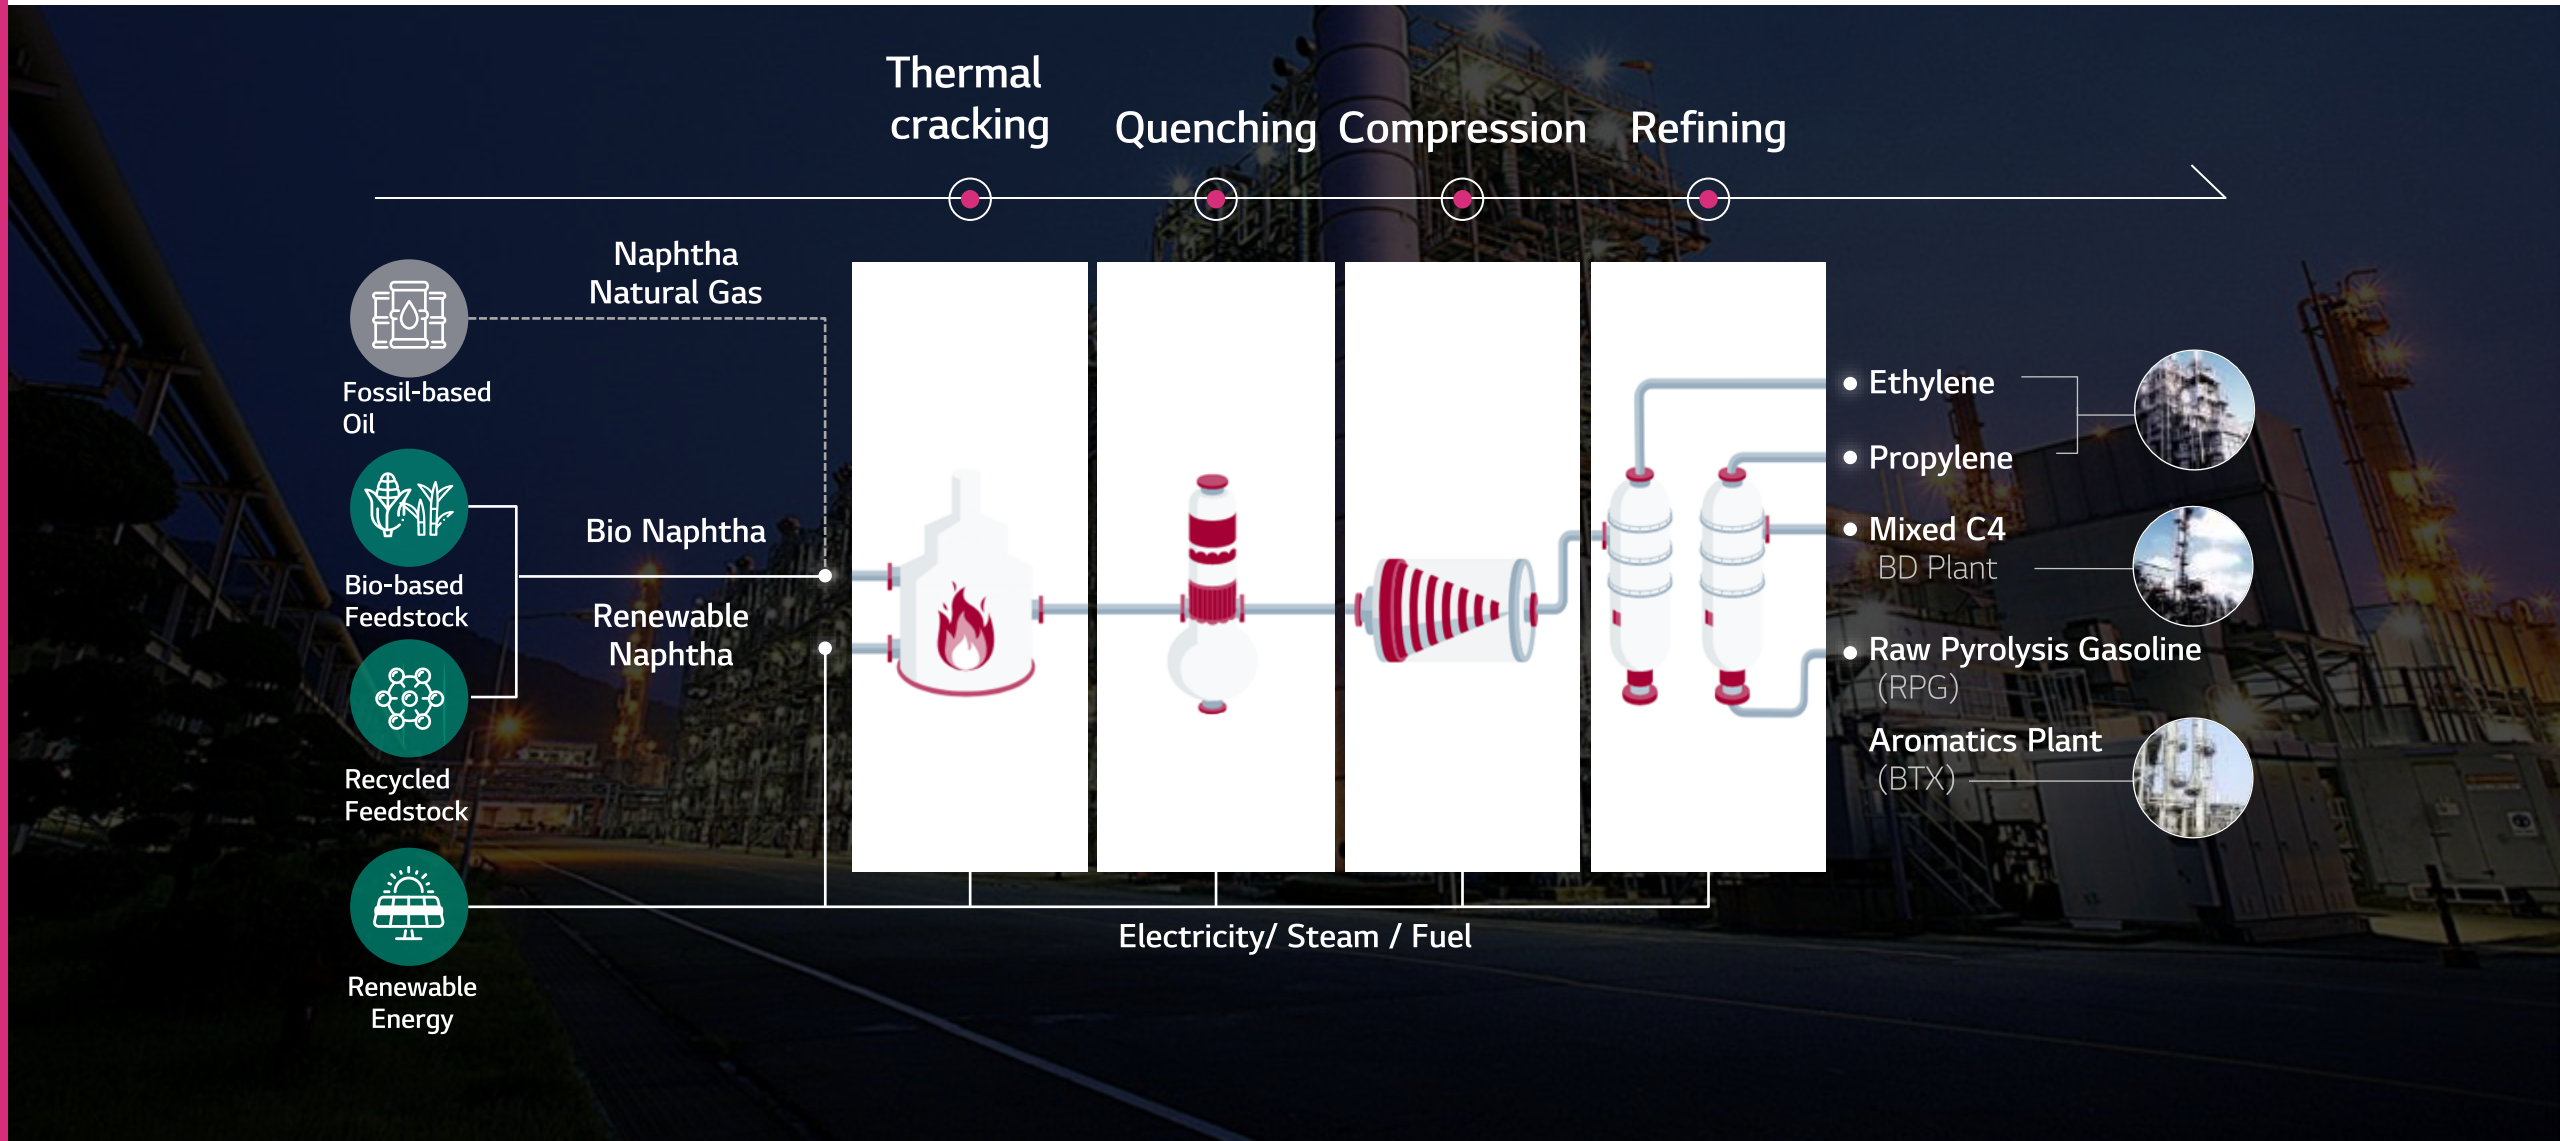
화장품 패키징(용기, 캡, 파우치 등)

건축자재(바닥재)

리사이클 소재(PCR)

Naphtha Cracking Center (NCC)

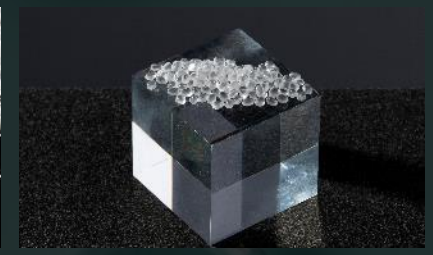
NCC (Naphtha Cracking Center) is a process for producing base oils for petrochemical products, such as ethylene and propylene.
They are supplied as raw materials for various products such as PO, synthetic rubber, and ABS.
LG Chem discovers and supplies alternative raw materials such as bio-materials and pyrolysis oil from waste plastic to reduce carbon, and develops various technologies for renewable energy and carbon capture for the eco-friendly conversion of our petrochemical plants.



Polyolefin (PO)

PE and PP are widely used general-purpose plastics for containers, packaging, and medical devices. LG Chem offers eco-friendly PO solutions such as BCB(Bio Circular Balanced) products made from bio-based materials. Used products are mechanically recycled into PCR PE and PCR PP for secondary packaging. LG Chem also develops world-class ultra-thin mono-material PE films to improve recyclability, and through chemical recycling, produces CB(Circular Balanced) products with quality comparable to virgin materials.

LD, LLD, HD, EVA
MDO, BOPE



Applications

Medical equipment

Ondol pipes

Product containers

Cable insulators

Packaging film

Automotive interior
and exterior parts

PVC/Plasticizers

PVC (Polyvinyl Chloride) is highly durable and has excellent insulation performance, making it suitable for processing with plasticizers to provide flexibility. It is used in various building materials and household products such as flooring, windows, and artificial leather. LG Chem leads the eco-friendly trend with BCB (Bio-Circular Balanced) products using bio-based raw materials, PCR PVC through recycling technology, and recycled plasticizers based on waste PET. Additionally, LG Chem produces caustic soda, which is widely used in advanced industries such as cathode manufacturing, and PC (Polycarbonate), known for its impact resistance and heat resistance, providing solutions for various fields.

PVC, Plasticizers
Caustic soda, Alcohol, PC

Applications

Sashes

Flooring

Pipes

EV Charging cable

Interior Car sheet

Car headlamps

Acrylonitrile Butadiene Styrene (ABS)

Acrylonitrile Butadiene Styrene (ABS) is a highly functional material mainly used in automobiles, home appliances, and IT devices for its excellent heat resistance, shock absorbance, and processability. LG Chem provides differentiated solutions to our customers, from producing chemical industry's very first white-colored PCR ABS and Asia's first eco-friendly BCB(Bio-Circular Balanced)ABS made of plant-based materials.

ABS, PCR-ABS,
SAN, PS, EPS

Applications

Electronics housing

Automotive interior/
exterior materials

Building materials

Toys

Product containers

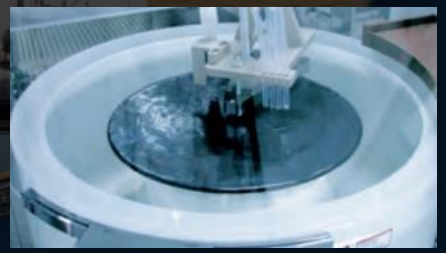
Recycle materials(PCR)

Acrylates / SAP(Super Absorbent Polymer)

LG Chem is the only manufacturer of acrylic acid, IPA, and NPG in Korea, and produces high-quality products based on proprietary technology.
Mainly used in paints, plasticizers, and SAP, Acrylates, Acrylic Acid have a myriad of applications in various fields for its excellent chemical reactions.
Additionally, the super absorbent polymer (SAP), used in diapers and hygiene products, has applied plant-based raw materials and obtained the world's first ISCC+ international certification, providing it to customer.

Acrylic Acid/Acrylates, SAP, IPA, NPG

Applications



Semiconductor cleaning agent

Eco-friendly powder coating

Diapers

Paint

Hand sanitizers

Bathroom appliances

High Performance Materials (HPM)

LG Chem's high-performance materials (HPM) provide various solutions to customers. Synthetic rubber is used as a raw material for tires and golf balls, and NBR latex is used for medical and industrial gloves, recognized for its excellent tensile strength and chemical resistance. MBS is used to enhance adhesion between other resins in impact modifiers and bio-plastic compounds, while SBS is used as a special additive for asphalt modifiers to impart various functions. Aerogel, with its high insulation and durability properties, is used for industrial insulation applications and battery thermal barriers. CNT, with high conductivity and dispersibility, and anode binders, with excellent adhesion and resistance performance, are utilized in lithium-ion batteries.

Rubber, NBL, MBS, SBS
SBS, Aerogel, CNT, Binder

Applications

Tires

Medical Gloves

Petrochemical plant Insulant

Impact modifiers

Asphalt

Lithium-ion batteries

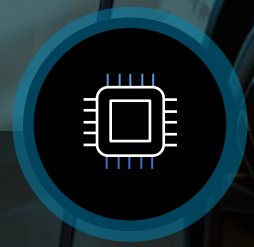
- **2000** First to develop PDP fluorescent substance in Korea.

Technology Leading Global Top-tier Battery & Electronic Materials

Advancing Technology Leadership In Next-Generation Battery Materials

- Accelerating the Development of innovation Materials
  - High-performance Cathode Materials (High Voltage / Cost Innovation)
  - High-Safety, Eco-Friendly Separators



Establishing New Growth Engines In Electronic Materials

- Developing New Material opportunities for Semiconductors and Automotive applications to Drive Business Expansion
- Diversifying the Customer Base for Display Materials and Preparing for the Future

Leading Future Technologies and Driving Innovation Acceleration

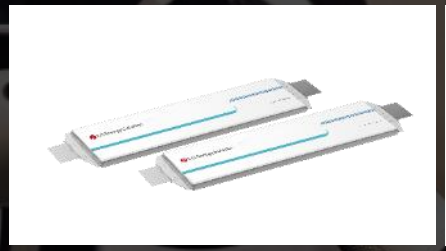
- Expanding Strategic R&D Investments
  - Securing Core Technologies Centered on Winning Technologies
- Strengthening R&D Execution Capabilities Based on AX

Battery Materials

In addition to cathode binders and dispersants, LG Chem is producing over 10 types of battery materials, including cathode materials and separators, which are core materials for secondary batteries.
We are also bolstering R&D across a wide range of fields, such as developing new materials for the technological advances in the next-generation batteries.
LG Chem will continue to strive to become the world's No. 1 comprehensive battery materials company with the highest level of safety and competitiveness.

Cathode materials
Separators etc.

Applications



Automotive batteries

Mobility & IT batteries

ESS batteries

Major Customers

LG Energy Solution
GM
TOYOTA
TESLA
PPES

Engineering materials

In mega trends such as e-mobility and sustainability, LG Chem is striving to create world no. 1 products by producing high-strength, lightweight automotive materials and eco-friendly PCR materials that are optimized for customer products and processes.

EPC (PC, PBT, PA , etc.)

Applications

Automotive interior and exterior materials

Engine parts

Recycled materials(PCR)

Major Customers

HYUNDAI MOTOR GROUP, GM, Volkswagen, Ford, STELLANTIS, LG전자, DELL, amazon, Google

Electronics Materials

LG Chem produces light-emitting materials for OLEDs and semiconductor back-end process materials, which are key materials for IT devices.
We are also working to accelerate the growth of our electronic film and adhesive products used in e-mobility.

Display Materials, Advanced semiconductor, E-mobility Materials

Applications

OLED Mobile/TV

Board for Semiconductor packages

Automotive interior and exterior parts

- **2024** Export of new drug technology for rare obesity treatment (to Rhythm Pharmaceuticals in the USA).
- **2023** Acquired AVEO, a US-based cancer drug company
- **2022** Applied for global Phase III clinical trial for Tigulixostat (new drug for gout) in the US
- **2021** Established LG Jiansheng Life Science in China
  Successfully completed Phase II clinical trial for new gout drug in the US
- **2019** Established Life Sciences Innovation Center in Boston, US (Now LG Chem Life science USA, Inc.)
- **2012** Developed 1st Korean diabetes medicine, 'Zemiglo'
- **2003** 1st Korean new chemical entity (NCE) approved by U.S. FDA (Factive)
- **1996** 1st Korean hepatitis B vaccine 'Euvax' approved by WHO PQ
- **1991** Developed World's first 4th generation Cephalosporin
- **1984** Start of pharmaceutical business (Established Pharmaceuticals business division)
- **1961** Acquire of manufacturing license pharmaceuticals products

An Oncology-focused Global Specialty Pharma Company

Strengthening the Oncology Innovative Drug R&D Portfolio

- Enhancing the Quality and Effciency of the New Dug Pipline
- Expanding and Accelerating Global Oncology Clinical Programs
- Sustaining Investment in New Drug R&D

Expansion of Global Business

- Securing Market Leadership in Renal Cancer in the U.S
- Strengthening the Global Oncology Product Portfolio
- Maximizing Growth Potential through Expanded Partnerships

Market Leadership & Overseas Market Expansion

- Strengthening Market Position of Leading Products
- Securing Next-Generation Flagship Products
- Expanding into Asian Markets, Including Thailand

Primary Care

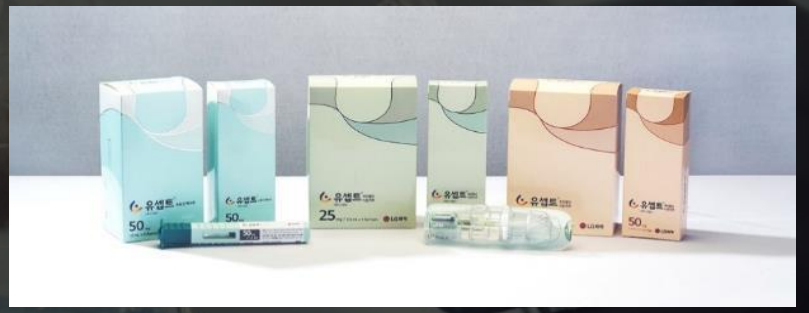
LG Chem has strengthened its competitiveness in both domestic and global markets by developing Korea's first diabetes treatment, Zemiglo, as well as the osteoarthritis treatment Synovian and the anemia treatment Espogen.
The company is also expanding its new drug development and global partnerships across key therapeutic areas, including diabetes, musculoskeletal disorders, cardiovascular diseases, and autoimmune diseases.

Representative Products

Diabetes (Zemiglo, Zemimet SR, Zemidapa)

Musculoskeletal Disease (Hyruan One)

Anemia (Espogen)



Autoimmune Disease (Eucept)

Specialty Care

LG Chem successfully developed Korea's first growth hormone stimulator and is dedicating its R&D capabilities to the development of specialty pharmaceuticals, including infertility treatments. In addition, the company is strengthening its position as a global supplier of essential vaccines through the provision of WHO-prequalified pentavalent vaccines and polio vaccines.

Representative Products

Grow Hormone (Eutropin S pen)

Ovulation Induction (Follitrope)

Pentavalent Combinatin (Eupenta)

Polio Vaccine (Eupolio)

AVEO Oncology

AVEO Oncology, acquired by LG Chem in 2023, is an oncology-focused biopharmaceutical company based in Boston, U.S.
Approved by U.S. FDA in 2021, AVEO is expanding its Kidney cancer drug(Fotivda®) sales, and is accelerating pipeline development including Head and Neck cancer drug.
Through AVEO Oncology, LG Chem aims to strengthen competitive edge in U.S. market for New drugs and become a global leading Oncology company.

Representative Product

Kidney Cancer Drug FOTIVDA®

Pipeline

Projects	Indications	Stage
Ficlatuzumab	Head and Neck Cancer	Phase III
Ficlatuzumab	Acute Myeloid Leukemia	Phase I
Rilogrotug	Cancer Cachexia	Phase I
